

MCTs may be located in the United States, and, even if the active user is located overseas, the MCTs may contain non-target communications of or concerning United States persons or that are to or from persons in the United States. Accordingly, this “unknown” category likely adds substantially to the number of non-target communications of or concerning United States persons or that are to or from persons in the United States being acquired by NSA each year.

In sum, then, NSA’s upstream collection is a small, but unique part of the government’s overall collection under Section 702 of the FAA. NSA acquires valuable information through its upstream collection, but not without substantial intrusions on Fourth Amendment-protected interests. Indeed, the record before this Court establishes that NSA’s acquisition of Internet transactions likely results in NSA acquiring annually tens of thousands of wholly domestic communications, and tens of thousands of non-target communications of persons who have little or no relationship to the target but who are protected under the Fourth Amendment. Both acquisitions raise questions as to whether NSA’s targeting and minimization procedures comport with FISA and the Fourth Amendment.

## 2. NSA’s Targeting Procedures

The Court will first consider whether NSA’s acquisition of Internet transactions through its upstream collection, as described above, means that NSA’s targeting procedures, as implemented, are not “reasonably designed” to: 1) “ensure that any acquisition authorized under [the certifications] is limited to targeting persons reasonably believed to be located outside the United States”; and 2) “prevent the intentional acquisition of any communication as to which the sender and all intended recipients are known at the time of the acquisition to be located in the

United States.” 50 U.S.C. § 1881a(d)(1); *id.* § (i)(2)(B). The Court concludes that the manner in which NSA is currently implementing the targeting procedures does not prevent the Court from making the necessary findings, and hence NSA’s targeting procedures do not offend FISA.

*a. Targeting Persons Reasonably Believed to be Located Outside the United States*

To the extent NSA is acquiring Internet transactions that contain a single discrete communication that is to, from, or about a tasked selector, the Court’s previous analysis remains valid. As explained in greater detail in the Court’s September 4, 2008 Memorandum Opinion, in this setting the person being targeted is the user of the tasked selector, and NSA’s pre-targeting and post-targeting procedures ensure that NSA will only acquire such transactions so long as there is a reasonable belief that the target is located outside the United States. Docket No.

[REDACTED]

But NSA’s acquisition of MCTs complicates the Court’s analysis somewhat. With regard to “about” communications, the Court previously found that the user of the tasked facility was the “target” of the acquisition, because the government’s purpose in acquiring such communications is to obtain information about that user. *See id.* at 18. Moreover, the communication is not acquired because the government has any interest in the parties to the communication, other than their potential relationship to the user of the tasked facility, and the parties to an “about” communication do not become targets unless and until they are separately vetted under the targeting procedures. *See id.* at 18-19.

In the case of “about” MCTs – *i.e.*, MCTs that are acquired because a targeted selector is referenced somewhere in the transaction – NSA acquires not only the discrete communication

that references the tasked selector, but also in many cases the contents of other discrete communications that do not reference the tasked selector and to which no target is a party. See May 2 Letter at 2-3 [REDACTED] By acquiring such MCTs, NSA likely acquires tens of thousands of additional communications of non-targets each year, many of whom have no relationship whatsoever with the user of the tasked selector. While the Court has concerns about NSA's acquisition of these non-target communications, the Court accepts the government's representation that the "sole reason [a non-target's MCT] is selected for acquisition is that it contains the presence of a tasked selector used by a person who has been subjected to NSA's targeting procedures." June 1 Submission at 4. Moreover, at the time of acquisition, NSA's upstream collection devices often lack the capability to determine whether a transaction contains a single communication or multiple communications, or to identify the parties to any particular communication within a transaction. See id. Therefore, the Court has no reason to believe that NSA, by acquiring Internet transactions containing multiple communications, is targeting anyone other than the user of the tasked selector. See United States v. Chemical Found., Inc., 272 U.S. 1, 14-15 (1926) ("The presumption of regularity supports the official acts of public officers, and, in the absence of clear evidence to the contrary, courts presume that they have properly discharged their official duties.").

*b. Acquisition of Wholly Domestic Communications*

NSA's acquisition of Internet transactions complicates the analysis required by Section 1881a(d)(1)(B), since the record shows that the government knowingly acquires tens of thousands of wholly domestic communications each year. At first blush, it might seem obvious

that targeting procedures that permit such acquisitions could not be “reasonably designed . . . to prevent the intentional acquisition of any communication as to which the sender and all intended recipients are known at the time of the acquisition to be located in the United States.” 50 U.S.C. § 1881a(d)(1)(B). However, a closer examination of the language of the statute leads the Court to a different conclusion.

The government focuses primarily on the “intentional acquisition” language in Section 1881a(d)(1)(B). Specifically, the government argues that NSA is not “intentionally” acquiring wholly domestic communications because the government does not intend to acquire transactions containing communications that are wholly domestic and has implemented technical means to prevent the acquisition of such transactions. See June 28 Submission at 12. This argument fails for several reasons.

NSA targets a person under Section 702 certifications by acquiring communications to, from, or about a selector used by that person. Therefore, to the extent NSA’s upstream collection devices acquire an Internet transaction containing a single, discrete communication that is to, from, or about a tasked selector, it can hardly be said that NSA’s acquisition is “unintentional.” In fact, the government has argued, and the Court has accepted, that the government intentionally acquires communications to and from a target, even when NSA reasonably – albeit mistakenly – believes that the target is located outside the United States. See Docket No. [REDACTED]

[REDACTED]

With respect to MCTs, the sole reason NSA acquires such transactions is the presence of a tasked selector within the transaction. Because it is technologically infeasible for NSA’s

upstream collection devices to acquire only the discrete communication to, from, or about a tasked selector that may be contained within an MCT, however, the government argues that the only way to obtain the foreign intelligence information found within the discrete communication is to acquire the entire transaction in which it is contained. June 1 Submission at 21. As a result, the government intentionally acquires all discrete communications within an MCT, including those that are not to, from or about a tasked selector. See June 28 Submission at 12, 14; see also Sept. 7, 2011 Hearing Tr. at 33-34.

The fact that NSA's technical measures cannot prevent NSA from acquiring transactions containing wholly domestic communications under certain circumstances does not render NSA's acquisition of those transactions "unintentional." The government repeatedly characterizes such acquisitions as a "failure" of NSA's "technical means." June 28 Submission at 12; see also Sept. 7, 2011 Hearing Tr. at 35-36. However, there is nothing in the record to suggest that NSA's technical means are malfunctioning or otherwise failing to operate as designed. Indeed, the government readily concedes that NSA will acquire a wholly domestic "about" communication if the transaction containing the communication is routed through an international Internet link being monitored by NSA or is routed through a foreign server. See June 1 Submission at 29. And in the case of MCTs containing wholly domestic communications that are not to, from, or about a tasked selector, NSA has no way to determine, at the time of acquisition, that a particular communication within an MCT is wholly domestic. See id. Furthermore, now that NSA's manual review of a sample of its upstream collection has confirmed that NSA likely acquires tens of thousands of wholly domestic communications each year, there is no question that the

government is knowingly acquiring Internet transactions that contain wholly domestic communications through its upstream collection.<sup>43</sup>

The government argues that an NSA analyst's post-acquisition discovery that a particular Internet transaction contains a wholly domestic communication should retroactively render NSA's acquisition of that transaction "unintentional." June 28 Submission at 12. That argument is unavailing. NSA's collection devices are set to acquire transactions that contain a reference to the targeted selector. When the collection device acquires such a transaction, it is functioning precisely as it is intended, even when the transaction includes a wholly domestic communication. The language of the statute makes clear that it is the government's intention at the time of acquisition that matters, and the government conceded as much at the hearing in this matter. Sept. 7, 2011 Hearing Tr. at 37-38.

Accordingly, the Court finds that NSA intentionally acquires Internet transactions that reference a tasked selector through its upstream collection with the knowledge that there are tens of thousands of wholly domestic communications contained within those transactions. But this is not the end of the analysis. To return to the language of the statute, NSA's targeting procedures must be reasonably designed to prevent the intentional acquisition of "any communication as to which the sender and all intended recipients are known at the time of

---

<sup>43</sup> It is generally settled that a person intends to produce a consequence either (a) when he acts with a purpose of producing that consequence or (b) when he acts knowing that the consequence is substantially certain to occur. Restatement (Third) of Torts § 1 (2010); see also United States v. Dyer, 589 F.3d 520, 528 (1st Cir. 2009) (in criminal law, "'intent' ordinarily requires only that the defendant reasonably knew the proscribed result would occur"), cert. denied, 130 S. Ct. 2422 (2010).

acquisition to be located in the United States.” 50 U.S.C. § 1881a(d)(1)(B) (emphasis added).

The underscored language requires an acquisition-by-acquisition inquiry. Thus, the Court must consider whether, at the time NSA intentionally acquires a transaction through its upstream collection, NSA will know that the sender and all intended recipients of any particular communication within that transaction are located in the United States.

Presently, it is not technically possible for NSA to configure its upstream collection devices [REDACTED]  
[REDACTED]  
[REDACTED]  
[REDACTED] the practical effect of this technological limitation is that NSA cannot know at the time it acquires an Internet transaction whether the sender and all intended recipients of any particular discrete communication contained within the transaction are located inside the United States.

Given that NSA's upstream collection devices lack the capacity to detect wholly domestic communications at the time an Internet transaction is acquired, the Court is inexorably led to the conclusion that the targeting procedures are "reasonably designed" to prevent the intentional acquisition of any communication as to which the sender and all intended recipients are known at the time of the acquisition to be located in the United States. This is true despite the fact that NSA knows with certainty that the upstream collection, viewed as a whole, results in the acquisition of wholly domestic communications.

By expanding its Section 702 acquisitions to include the acquisition of Internet transactions through its upstream collection, NSA has, as a practical matter, circumvented the spirit of Section 1881a(b)(4) and (d)(1) with regard to that collection. NSA's knowing acquisition of tens of thousands of wholly domestic communications through its upstream collection is a cause of concern for the Court. But the meaning of the relevant statutory provision is clear and application to the facts before the Court does not lead to an impossible or absurd result. The Court's review does not end with the targeting procedures, however. The Court must

also consider whether NSA's minimization procedures are consistent with §1881a(e)(1) and whether NSA's targeting and minimization procedures are consistent with the requirements of the Fourth Amendment.

3. NSA's Minimization Procedures, As Applied to MCTs in the Manner Proposed by the Government, Do Not Meet FISA's Definition of "Minimization Procedures"

The Court next considers whether NSA's minimization procedures, as the government proposes to apply them to Internet transactions, meet the statutory requirements. As noted above, 50 U.S.C. § 1881a(e)(1) requires that the minimization procedures "meet the definition of minimization procedures under [50 U.S.C. §§] 1801(h) or 1821(4) . . . ." That definition requires "specific procedures, which shall be adopted by the Attorney General, that are reasonably designed in light of the purpose and technique of the particular [surveillance or physical search], to minimize the acquisition and retention, and prohibit the dissemination, of nonpublicly available information concerning unconsenting United States persons consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information." 50 U.S.C. §§ 1801(h)(1) & 1821(4)(A). For the reasons stated below, the Court concludes that NSA's minimization procedures, as applied to MCTs in the manner proposed by the government, do not meet the statutory definition in all respects.

a. *The Minimization Framework*

NSA's minimization procedures do not expressly contemplate the acquisition of MCTs, and the language of the procedures does not lend itself to straightforward application to MCTs. Most notably, various provisions of the NSA minimization procedures employ the term

“communication” as an operative term. As explained below, for instance, the rules governing retention, handling, and dissemination vary depending whether or not a communication is deemed to constitute a “domestic communication” instead of a “foreign communication,” see NSA Minimization Procedures §§ 2(e), 5, 6, 7; a communication “of” or “concerning” a U.S. person, see id. §§ 2(b)-(c), 3(b)(1)-(2), 3(c); a “communication to, from, or about a target,” id. § 3(b)(4); or a “communication . . . reasonably believed to contain foreign intelligence information or evidence of a crime,” id. But MCTs can be fairly described as communications that contain several smaller communications. Applying the terms of the NSA minimization procedures to MCTs rather than discrete communications can produce very different results.

In a recent submission, the government explained how NSA proposes to apply its minimization procedures to MCTs. See Aug. 30 Submission at 8-11.<sup>45</sup> Before discussing the measures proposed by the government for handling MCTs, it is helpful to begin with a brief overview of the NSA minimization procedures themselves. The procedures require that all acquisitions “will be conducted in a manner designed, to the greatest extent feasible, to minimize the acquisition of information not relevant to the authorized purpose of the collection.” NSA

---

<sup>45</sup> Although NSA has been collecting MCTs since before the Court’s approval of the first Section 702 certification in 2008, see June 1 Submission at 2, it has not, to date, applied the measures proposed here to the fruits of its upstream collection. Indeed, until NSA’s manual review of a six-month sample of its upstream collection revealed the acquisition of wholly domestic communications, the government asserted that NSA had never found a wholly domestic communication in its upstream collection. See id.
